

英文	中文
the flow/process diagram	流程图 The flow diagram shows the stages in the process of making chocolate.
Process/procedure	n.过程 The whole process can be divided into four major steps.
Involve/include	V.包括 It involves the following steps.
Be made up of/ consist of	由.....组成 Life of the silkworm consists of four main stages.
be divided into	被分成 The whole process can be divided into four major steps.
Step	n.步骤 The whole process can be divided into four major steps.

# 三、流程图常用词汇

## 流程图

英文	中文
phase/stage	n.阶段 There are three phases in the lifecycle of a butterfly.
At first=firstly=initially=in the first stage	首先，最开始 At first, when the pods are ripe, they are harvested.
then=in the next step=after that=in the following stage =subsequently =afterwards	其次，随后 They are then put in large sacks and transported by train or lorry
at this point=in this phase/stage	在这个阶段 At this stage, the beans are taken to a chocolate factory
finally=eventually=at last= ultimately =in the final step	最后，最终 Finally, the inner part of the bean is pressed and liquid chocolate is produced.

#### 课堂词汇练习：

1. 流程图展示的是玻璃是怎么回收的，它包括如下五个步骤。

The flow diagram indicates how glass is recycled which involves the following five steps.

2. 为建筑业制作砖的整个过程被分为七个连续的步骤。

The process by which bricks are manufactured for the building industry can be outlined in seven consecutive steps.

3. 首先，融化的塑料按照颜色区分，被倒进三个不同的模具。

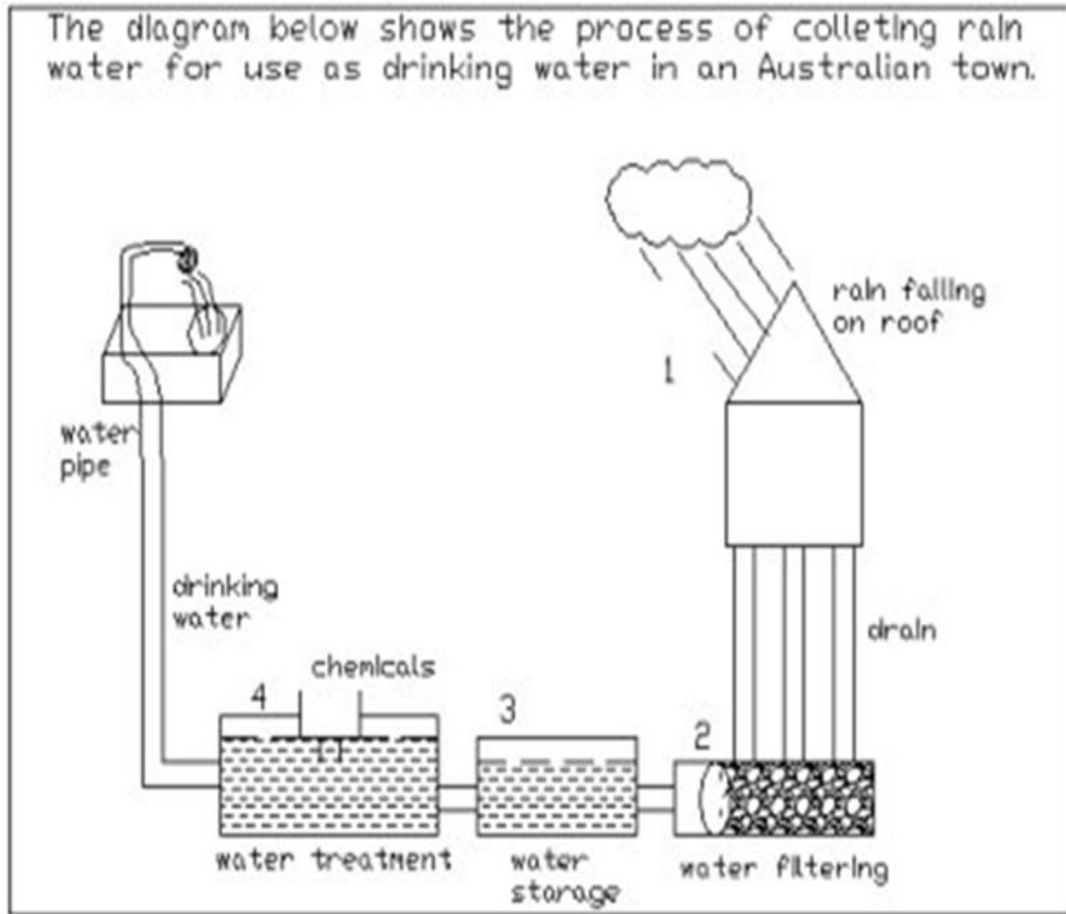

To begin with, molten plastic is poured into three different moulds depending on the color required.

4. 在炉中被回收后，玻璃制品被熔化成再生的玻璃液体。

After being recycled in the furnace, glass products are melted into recycled liquid glass.

5. 玻璃制品是由特殊的卡车运送到净化厂，在那里他们通过高压水获得净化。

Glass products are transported by special trucks to the Cleaning plant, where they get purified by high-pressured water.

The diagram below shows the process of collecting rain water for use as drinking water in an Australian town.

Provided is the flow diagram **illustrating** the process of how to change rain water into drinking water by using different **equipments** in an Australian town.

There are four main stages in this **procedure**: collecting, filtration, storage and treatment. **First of all**, rain water is **gathered** as it drips from the roof of the house, and **then directed** to the next stage through drains. In order to ensure that the rain water contains less **contamination**, it must be fully filtered in the second stage. **After being filtered through screens and closed gutters in the filter**, the rain water is **delivered** to a large container where it is carefully stored.

The rain water is not **potable** after the first two stages; therefore, it is necessary to conduct the part of treatment before it can be drunk by people. **In the treatment stage**, some chemicals are added **for the sake of hygiene quality** and safety. **Eventually**, the drinking water will be **led to** residents' houses through water pipe.

Overall, it can be seen that rain water can be changed into drinking water through a relatively complicated process.

The diagrams below show the life cycle of the silkworm and the stages in the production of silk cloth.
